

BLADE SIZING CHART

SPINNER BLADES

All of our plated blades are stamped from marine grade rustproof brass.

FINISH

Blade finish works with the shape of the blade to reflect light. A smooth finish blade reflects light from only one point of the blade. Hammered blades reflect light from most of their surface.

SIZE

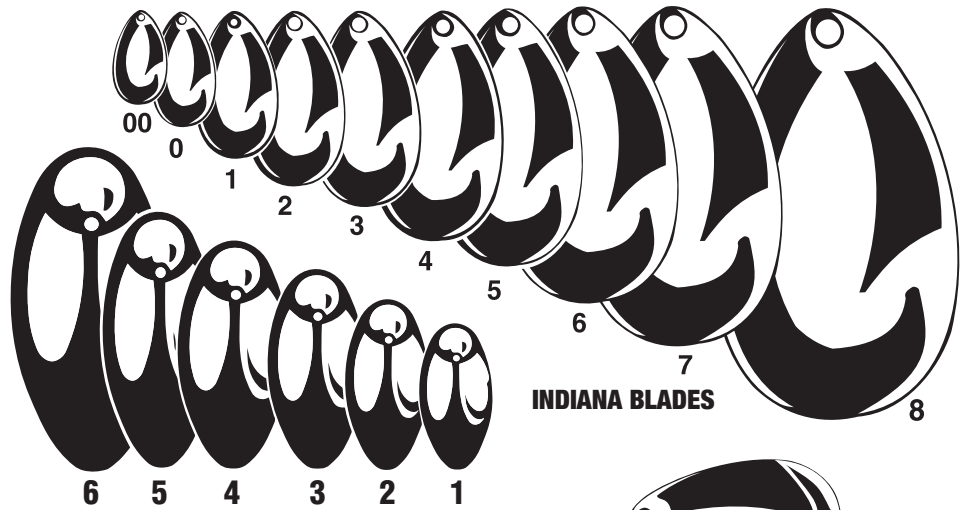

Plays a part in how deep the lure will run. Large blades give more lift to a lure than small blades so large blade lures will run shallower than small blade lures.

SHAPE

The shape of the spinner blade determines how fast and how far from the shaft a blade will spin. Shape also affects how easy a blade is to start.

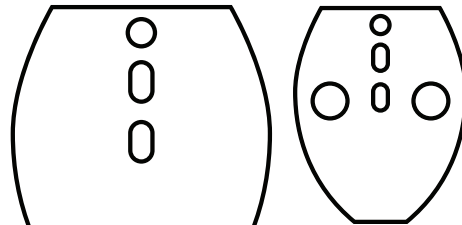

COLOR

Blades are made in different colors to help you fit your bait to the fishing conditions. Weather, water clarity, and water temperature all play a part in what the fish hit.
